

# Package: surrosurvROC (via r-universe)

June 7, 2026

**Type** Package

**Title** Surrogate Survival ROC

**Version** 0.1.0

**Author** Yunro Chung [cre]

**Maintainer** Yunro Chung <yunro.chung@asu.edu>

**Description** Nonparametric and semiparametric estimations of the time-dependent ROC curve for an incomplete failure time data with surrogate failure time endpoints.

**Depends** R (>= 3.5.0), survival

**License** GPL (>= 2)

**Encoding** UTF-8

**LazyData** true

**NeedsCompilation** no

**Repository** <https://ze23i651096531.r-universe.dev>

**Date/Publication** 2018-08-30 15:20:03 UTC

**RemoteUrl** <https://github.com/cran/surrosurvROC>

**RemoteRef** HEAD

**RemoteSha** 89a24e1d2a03e3fdec2dd9fa1d4e06384d6d1a98

surrosurvROC-package    *Surrogate Survival ROC*

---

### Description

Nonparametric and semiparametric estimations of the time-dependent ROC curve for an incomplete failure time data with surrogate failure time endpoints.

### Details

Package: isoph  
Type: Package  
Version: 0.1.0  
Date: 2018-08-17  
License: GPL (>= 2)

### Author(s)

Yunro Chung [cre]  
Maintainer: Yunro Chung <yunro.chung@asu.edu>

### References

---

### Description

Nonparametric and semiparametric estimations of the time-dependent ROC curve for an incomplete failure time data with surrogate failure time endpoints

### Usage

```
surrosurvROC(DATA, method, pred.time, wt=NULL, span=NULL, b.rep=200)
```

**Arguments**

DATA	data frame, consisting of Marker: Predictor or marker value; Survival time; Status: Event indicator (1: event; 0: censoring); STime: Surrogate survival Time; SStatus: Surrogate event indicator (1: event; 0: censoring)
method	"KNN" for nonparametric model using nearest neighborhood kernel; "COX" for semiparametric proportional hazard model
pred.time	Prediction time of the ROC curve
wt	Weight, such as inverse probability weighting
span	Smoothing bandwidth parameter for KNN
b.rep	Number of bootstrap

**Details**

It provides a more efficient time-dependent ROC curve for an incomplete failure time data, when surrogate failure time endpoints are additionally observed for all subjects.

**Author(s)**

Yunro Chung [cre]

**Examples**

```
DATA=data.frame(
  Time= c(1,2,5,3,9,NA,8,9,10,NA,NA,NA,6,4,NA,NA,NA,NA,NA,NA,NA,NA,NA),
  Status= c(1,1,0,0,1,NA,1,1,0, NA,NA,NA,0,0,NA,NA,NA,NA,NA,NA,NA,NA,NA),
  STime= c(3,2,4,2,8,5,8,7,11,1,8,9,3,5,2,5,10,3,5,8,5,2,4,6,7),
  SStatus=c(1,0,1,0,1,1,1,0,0,1,1,1,0,1,1,0,0,1,0,1,0,1,0,0),
  Marker= c(1,5,1,2,3,1,2,3,4,5,9,8,5,7,3,4,2,5,3,4,7,5,9,3,8)
)

#COX at year 3
RES1=surrosurvROC(DATA, method="COX", pred.time=3)
print(RES1)

#KNN at year 3
nobs=sum(!is.na(DATA$Time))
span=0.25*nobs^(-0.20)
RES2=surrosurvROC(DATA, method="KNN",pred.time=3,span=span)
print(RES2)
```
